Kitchen Story
(Sprint work and Project Specification)

Version History:

Author	Nikhil Jain
Purpose	Scrum details and specifications of the application
Date	10th December 2021
Version	1.0

Table of Contents

1. Modules in the project

1. Kitchen Story homepage displays product listed in the database through REST API endpoints and have four options on Navigation bar; Login, Register, Admin and Cart.

2. User can click on Add to Cart option of any listed products to proceed with the purchase. The products data are fetched from the MongoDB database, connected to server via Spring Data MongoDB, and is hosted on MongoDB Atlas.

3. User can also search product listed on the website. Using the search option at homepage.

4. Once a user clicks the checkout button, they will be taken to the checkout page to fill in their shipping/billing details and proceed to payment gateway.

5. From the payment gateway, users are redirected to a purchase confirmation page with the details of the purchase.

6. For the above features to work, there is an admin backend with the following features:
   - An admin section, where the admin can view, add and delete the products present on the database.

2. Sprint wise work

Sprint number	Modules
1	Design homepage and user security with JWT authentication.
2	Fetch available products from database and display on the homepage using REST API endpoints.
3	Cart page with details of product and checkout page for user delivery details. Confirmation page with summary of all the purchased product(s).
4	Admin Dashboard page with all the products data fetched from the database and add item button. Testing. Deployed on Heroku Cloud Application Platform using Github.

3. Project Link

Repository Name	Kitchen Story
GitHub Link	https://github.com/Niks4u2/KitchenStory
Deployed On	http://kitchen-story-angular.herokuapp.com/home

4. Core Java Concepts Used

- Working with database (MongoDB)
- Naming Standards
- Exceptions
- Modularity
- Object Oriented Programming
- Collections
- Control structures
- Data Structures
- Hibernate
- Spring Boot
- Spring Security
- Spring Data MongoDB
- JWT Authentication

5. Tools and Technologies Used

- ➤ HTML, CSS, Typescript, Angular, Angular Material for **View**.
- ➤ Spring Boot as **Controller**
- ➤ MongoDB database using Spring Data MongoDB for **Model** to persist data for admin, users and product. Hosted on a remote server at MongoDB Atlas.
- ➤ Tomcat 9.0 as an Application Server.
- ➤ Eclipse: As an IDE to code for the application.
- ➤ VS Code: As an IDE to design frontend of the application using Angular.
- ➤ Java: A programming language to develop the web pages, databases.
- ➤ Maven: To create a web-enabled Maven project.
- ➤ Git: To connect and push files from the local system to GitHub
- ➤ GitHub: To store the application code and track its versions
- ➤ Scrum: An efficient agile framework to deliver the product incrementally.
